Larkway Support Policy v5

Status: CURRENT

Effective: 1 J

1. Scope and source precedence

This policy sets the default severity levels and first-response targets for Larkway support. A signed customer agreement can override these defaults. When sources disagree, apply the signed customer agreement first, then this support policy and the current SOPs, then current product documentation. Past tickets and internal notes are background only and may record incorrect advice.

2. Severity definitions

- P1 - Critical: Customers cannot create any shipments (a full production outage), a confirmed security incident or suspected credential exposure, or any other event causing immediate serious business risk with no workaround.
- P2 - High: A major feature is unavailable or badly degraded for a customer, but core operations can continue or a workaround exists.
- P3 - Normal: A minor defect, a how-to question, a configuration request, or an issue with limited operational impact.

3. Default first-response targets

Plan P1 P2 P3

Enterprise

4. Escalation

Escalate every P1 incident immediately. If a first-response target has already been breached, say so plainly and recommend escalation instead of hiding the uncertainty.
